

# Save energy with intelligent heating by :-

## The Economy Radiator Company

If you've been put off electric heating by old fashioned, cumbersome storage heaters that only provide heat in the night unless you pay a premium rate in the day - think again.

Without pipes, wires, or the need of a boiler, "The Economy Radiator company's" new energy saving and environmentally friendly electric central heating provides perfect heat at anytime. Considering that a quarter of the UK's carbon emissions are created by energy generated in the home, this has to be good news in the global fight against climate change.

To maximise the power used, "The Economy Radiator company's" thermo-dynamic fluid filled radiators absorb energy quickly, heat rapidly and emit heat slowly, whilst the amount of energy required to keep each radiator at the desired temperature is calculated by its own intelligent thermostat. By only using the exact amount of energy that the independently working radiators need, "The Economy Radiator company's" responsive heating system can reduce energy consumption by as much as 35% to 50% depending on the existing system already installed.

Whether you install just one or a number of radiators, individual radiators can also be programmed to adjust temperature whenever required, making it possible for everyone to have their rooms as they like, when they like, and without the need to heat a whole house when rooms are not in use. What's more, by using "The Economy Radiator company's" technically advanced Cyclope® wireless programmer, you can control every radiator from the comfort of your sofa and monitor your energy consumption too.

Available in three stylish aluminium or steel ranges, "The Economy Radiator company's" radiators are ideal as a complete heating system for an entire property or as stand alone heating in extensions, garden rooms and conservatories, especially where there are no gas or oil supplies.

"The Economy Radiator company's" is an established brand in Europe. Further information telephone 01845 501808, email [info@economy-radiator.com](mailto:info@economy-radiator.com) or visit [www.economy-radiator.com](http://www.economy-radiator.com)

**Ends**

We have two manufacturing plants (total 20,000 square metres), both of which are in the Burgundy region of France. The company has a production capacity of 5,000 radiators per day and an average output of 190,000 radiators per year and is a well-established brand in Europe. The company's UK base is in Thirsk North Yorkshire
