

Heating at your fingertips

“The economy radiator company’s” energy saving and environmentally friendly electric central heating system is even more energy efficient when it is controlled with Cyclope®, a revolutionary, new hand held programmer that uses advanced wireless technology to connect intelligence to heating.

Cyclope® can remotely pre-set individual room temperatures and adjust them as often as required, whether hourly or weekly, providing an unrivalled level of control and making it as easy to control your entire heating system as it is to change your TV channel. Now you can turn independently working radiators on or off, or vary temperatures between background heat and comfort levels, without leaving your sofa!

Cyclope®, with its infinite menu of options, is not dissimilar to a mobile phone in function. It can monitor the energy consumption of each radiator, individual rooms and even an entire house. By using energy more efficiently it is also easier to budget for heating bills and make savings too.

“The economy radiator company’s” electric heating is compliant with the energy efficiency requirements of the latest Building Regulations Part L, 1 and 2, which requires homes to be divided into heating zones xxxx. Working in conjunction with “The economy radiator company’s” heat retaining, thermo-dynamic fluid filled electric radiators and towel rails, Cyclope® provides fingertip control of a heating system that can reduce energy consumption by as much as 35% to 50% depending on the existing heating system installed.

“The economy radiator company’s” is an established brand in Europe. Further information telephone 01845 501808, email info@economy-radiator.com visit www.economy-radiator.com

Ends
